

Product Release Announcement: JUNE Version 8.0 Comes to Life

New Design | Smarter Collaboration | Self-Learning AI

JUNE is constantly evolving—faster, smarter, and sleeker than ever.

Since the very beginning of our journey, our goal has been transforming traditional legal processes into **modern workflows** to redefine how legal teams work and collaborate in the age of AI. And each new release allows us to meet **new requirements** and make use of new available technologies.

Even if **efficiency** and **automation** are the key elements that define our platform, our focus is on humans, specifically our **customers and their needs**. Every single process and feature within our platform have been created by **legal experts** to address daily struggles linked to repetitive, complex tasks in a sea of unstructured documents flooding in from several sources in different formats.

And in line with our vision of **becoming the global leader in AI-driven legal case management**, our product roadmap prioritizes feedback we receive directly from our **users** to make their work and the collaboration with internal or external stakeholders even **simpler** and adding value at each step of a workflow with **actionable insights** and **legal intelligence**.

This constant iteration with our customers is the driving force behind JUNE's latest release that our product and engineering teams will soon be able to deploy.

Version 8.0 introduces a refreshed interface, groundbreaking AI capabilities, and a new way for legal teams to collaborate.

To avoid potential disruptions and ensure a smooth transition, the new interface will be **phased in stages** and customers will receive **full support** every step of the way.

JUNE VERSION 8.0 COMES TO LIFE

Revamped User Interface

Our customers will soon experience a **cleaner**, tidier, and even **more performant** workspace with immediate focus on the relevant information which is required at each step of case management.

In each section, pertinent content and features have now become **more prominent** and clearly visible to ensure a streamlined working experience. The redesigned User Interface (UI) enhances visibility and usability without changing how users access familiar features. Therefore, it **won't be necessary to re-learn** how to operate JUNE.

The new design relies on improved contrast between elements highlighting AI features and overall **assisting users** through color-coded sections and features. The new color scheme and layout add to a more modern look but also improved **usability** and **accessibility**.

Opposing Law Firm Massive Attack LLP

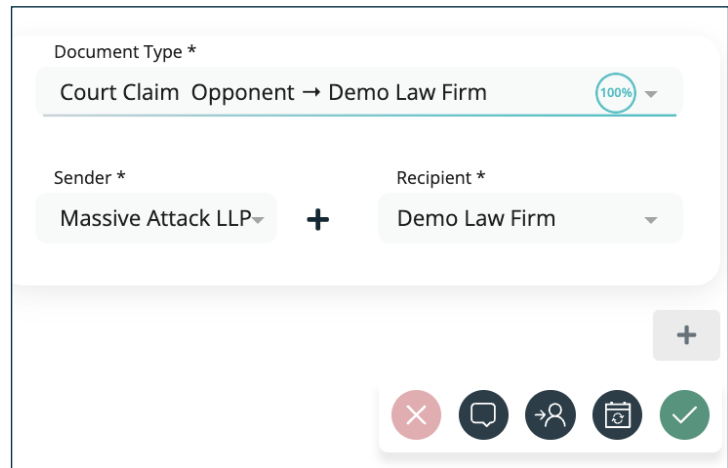

Client Bauunternehmung Schwarz GmbH & Co. KG

Opponent Tobias Weiß

Smarter with Each Document

Under-the-hood improvements deliver faster, more responsive workflows – making daily tasks more **efficient** and **reliable**.

Thanks to the evolutionary nature of generative AI, extraction capabilities are also constantly evolving. And this also affects document classification. From now on, the system will become **smarter with every new document it processes**.

The screenshot displays a user interface for document processing. At the top, a 'Document Type *' dropdown menu is set to 'Court Claim Opponent → Demo Law Firm', with a '100%' completion indicator. Below this, the 'Sender *' field is set to 'Massive Attack LLP' and the 'Recipient *' field is set to 'Demo Law Firm'. A plus sign (+) is located between these two fields. At the bottom right, there is a row of five circular icons: a red 'X', a speech bubble, a person icon, a calendar icon, and a green checkmark. A plus sign (+) is also visible in the bottom right corner of the form area.

Each single recognized piece of information will help automatically classify new documents more accurately and based on context derived from similar documents. This means that the more users work in JUNE, the smarter the system gets, without the need for manual training.

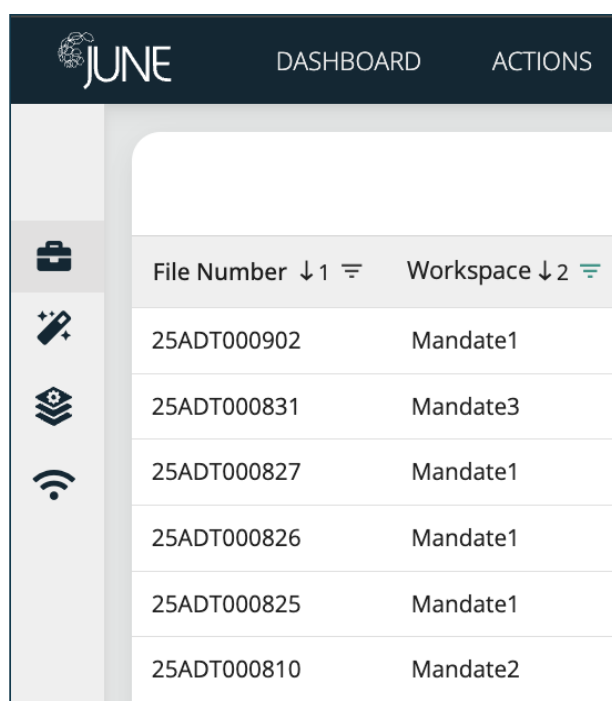

Document classification has traditionally relied on Machine Learning (ML) processes. This means that classification and extraction capabilities used to require supervised learning through test documents to improve accuracy.

Now, thanks to generative AI capabilities, the platform **autonomously** “understands” documents based on statistical similarity to all other documents that already have been processed. This eliminates the need for pre-training while the system keeps improving performance over time by simply tapping into more documents and “gathering more experience.”

One of the many advantages connected to this new approach is having an expert system that works from the get-go. While implementation of classification and data extraction systems was previously slowed down by an initial training phase with hundreds of in-house sample documents, generative AI guarantees the **same level of accuracy virtually out-of-the-box** (with just a handful of documents available).

Workspaces - Closer Collaboration Secure by Design

One of the core components of JUNE has always been the possibility to centralize all case-relevant documents in a single platform that allows synchronous or asynchronous **seamless collaboration** between internal and external legal units.

JUNE		DASHBOARD	ACTIONS
   	File Number ↓ 1 	Workspace ↓ 2 	
	25ADT000902	Mandate1	
	25ADT000831	Mandate3	
	25ADT000827	Mandate1	
	25ADT000826	Mandate1	
	25ADT000825	Mandate1	
	25ADT000810	Mandate2	

Version 8.0 guarantees an even **tighter collaboration** between legal departments and partner law firms.

Our **enhanced collaborative workspaces** enable flawless collaboration between legal departments and law firms. However, since **data privacy** and **data security** always represent our key priorities, centralized document management and maintenance within JUNE still meets individualized privacy needs while being powered by **top-tier security** and **compliance**.

Despite multiple teams being able to work on the same centralized project, the system is designed to ensure that each separate team (internal or external) is only granted

access to information which is relevant to them through individual access rights. And while the workspace is obviously designed to facilitate collaboration, every team in the platform can create their own workflows, set their own **deadlines**, and manage **personal inboxes**.

Such administrative functions not only do guarantee data privacy but also introduce more clarity in collaborative processes avoiding, for instance, confusion linked to discording deadlines.

Additional Bonus: Intelligent In-Product Assistance

JUNE's improved User Interface, as mentioned, was developed to further simplify the User Experience and make the workspace even more intuitive for legal teams. Finally, even if unrelated with our product release, it is also worth mentioning that our product and success teams also introduced new **guided on-screen assistance** to support the onboarding of new users and assist existing users directly **within the platform**.

From now on, our **legal assistant** will be able to answer questions regarding JUNE autonomously, provide more details through documentation, but also **interactively guide users step-by-step through processes** with on-screen guides.

Our virtual assistant is designed to guarantee **task success** in our platform, but this doesn't mean that we decided to eliminate other forms of support. Our Customer Success Managers and our Customer Support teams remain available for our customers providing yet another layer of assistance for users.

JUNE 8.0 is not just an update – it's a leap forward in legal tech and our team is extremely proud to be able to present our new release to our existing and prospective customers.
